

Instructions KIT I

KIT assembly

Video instructions on setting up the KIT can be found at www.video.ethz.ch/play/be12094e-ada8-4ad9-8146-746c51ff379f and the link can be opened by using the QR code on the right. If you cannot access the video, connect the cables and connections as shown in the following pictures:

After connecting the connector strip in the recording case to the power, all of the devices can be supplied with electricity via the connector strip.

Connect the document camera to the power supply. The HDMI cable is connected to "HDMI OUT" and to the recording device.

Connect the HDMI cable to the "HDMI IN" socket on the recording device.

On the other side, the recording device has already been connected to the microphone socket and the power supply. Here you will also find the button for switching the recording device on and off.

Connect the microphone (headset) to one of the black XLR jacks.

The recording process can be started and stopped by pushing the red "Rec Button" on the lower edge of the recording device. Replay via "Play".
